

transpiration pdf

Transpiration is the process of water movement through a plant and its evaporation from aerial parts, such as leaves, stems and flowers. Water is necessary for plants but only a small amount of water taken up by the roots is used for growth and metabolism. The remaining 97-99.5% is lost by transpiration and guttation. Leaf surfaces are dotted with pores called stomata, and in most plants they ...

Transpiration - Wikipedia

In plants, the transpiration stream is the uninterrupted stream of water and solutes which is taken up by the roots and transported via the xylem to the leaves where it evaporates into the air/apoplast-interface of the substomatal cavity. It is driven by capillary action and in some plants by root pressure. The main driving factor is the difference in water potential between the soil and the ...

La transpiration animale est l'évacuation de la sueur chez les mammifères.; La transpiration végétale est l'élimination de la vapeur d'eau chez les plantes.; La transpiration émotionnelle est l'élimination immédiate de la sueur face à des stimuli émotionnels tels que le stress ou l'anxiété.

Transpiration - Wikipedia

By Sunny Datko. What is Transpiration? Water in the roots is pulled through the plant by transpiration (loss of water vapor through the stomata of the leaves). Transpiration uses about 90% of the water that enters the plant. The other ten percent is used in photosynthesis and cell growth.. How Does Transpiration Work?

What is Plant Transpiration? - SD Hydro

La transpiration (ou sudation) est la production et évacuation de sueur par les pores de la peau ou au travers de certaines muqueuses (pulmonaire notamment).. L'existence d'une transpiration par la peau et les poumons a été démontrée expérimentalement pour la première fois en 1614, par Santorio Santorio, médecin italien.

Evapotranspiration bezeichnet in der Meteorologie die Summe aus Transpiration und Evaporation, also der Verdunstung von Wasser aus Tier- und Pflanzenwelt sowie von Boden- und Wasseroberflächen. Der Evapotranspirationswert spielt eine wichtige Rolle in der Hydrologie sowie in Landwirtschaft und Gartenbau sowie bei der Berechnung des weltweiten Wasserbedarfs.
